[linkedin.com/in/himanshu-sharma-3386a230b](https://www.linkedin.com/in/himanshu-sharma-3386a230b)

I am a motivated and detail-oriented Computer Science and Design student with a clear and logical mindset and a practical approach to problem-solving. I am passionate about learning new technologies, working under pressure, and overcoming challenges effectively. I have a strong foundation in programming languages (Java, Python), web development and machine learning. I have gained hands-on experience through projects which I have worked on. Through these experiences, I have strengthened my technical, analytical, and teamwork skills, and I am eager to apply my knowledge to contribute effectively in a professional environment.

PROFESSIONAL SUMMARY

- Data Analytics professional with hands-on experience in data collection, cleaning, exploratory data analysis (EDA), and deriving actionable insights from complex datasets using Python (Pandas, NumPy, Matplotlib, Seaborn).
- Proficient in building and evaluating machine learning models for prediction and classification tasks using Scikit-learn; experienced in model evaluation metrics such as accuracy, F1-score, and confusion matrix.
- Strong foundation in data visualization and storytelling using Matplotlib, Seaborn, Power BI, and Tableau to communicate insights to stakeholders.
- Proficient in programming languages including Python and Java, with a solid understanding of object-oriented programming concepts.
- Skilled in using Git for version control and collaborative software development.
- Familiar with database technologies including MySQL; capable of writing SQL queries for data extraction and analysis.
- Motivated to grow in the Data Analytics field, eager to apply analytical skills and contribute to data-driven solutions in a collaborative team.

WORK EXPERIENCE

Take It Smart

Data Science Intern | Bengaluru, Karnataka | Feb 2026 – May 2026

- Assisted in data collection, cleaning, and preprocessing using Python libraries such as Pandas and NumPy.
- Performed exploratory data analysis (EDA) to identify trends, patterns, and insights from datasets.
- Built and evaluated machine learning models for prediction and classification tasks using Scikit-learn.
- Worked with data visualization tools like Matplotlib, Seaborn, Power BI, and Tableau to present insights.
- Collaborated with team members to understand business problems and translate them into data-driven solutions.
- Documented workflows, models, and results to ensure reproducibility and clarity.

SKILLS

Technical Skills: Python, Pandas, NumPy, Matplotlib, Seaborn, EDA, Data Cleaning, Scikit-learn, SQL, MySQL, HTML5, CSS3, JavaScript (ES6+), Git, Figma, Adobe, Canva, OOPs with Java, UI/UX, Eclipse, n8n, Tableau, Power BI

Soft Skills: Communication, Problem-solving, Adaptability, Teamwork, Attention to Detail

Core Competencies: Data Analysis, Exploratory Data Analysis, Data Visualization, Machine Learning, Web Application Development, Responsive Design, UI/UX Optimization, Code Review, Version Control, Microsoft Visual Studio Code, Cross-Browser Compatibility, API Integration

EDUCATION

K.S Institute of Technology, Bengaluru, Karnataka

Bachelor of Engineering | CGPA: 8.5 | 2022 – 2026

New Angels Senior Secondary School, Pratapgarh, Uttar Pradesh

Intermediate | 88.4% | 2020 – 2021

New Angels Senior Secondary School, Pratapgarh, Uttar Pradesh

High School | 84.8% | 2018 – 2019

PROJECTS

HR Attrition Prediction

Technologies: Python, Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, Streamlit

- Built a machine learning model to predict employee attrition using HR datasets, enabling proactive retention strategies.
- Performed comprehensive EDA to uncover key factors driving attrition such as job satisfaction, overtime, salary, and tenure.
- Applied feature engineering and encoding techniques (Label Encoding, One-Hot Encoding) to prepare categorical HR data for modelling.
- Trained and compared multiple classification models including Logistic Regression, Random Forest, and Gradient Boosting; achieved high accuracy using cross-validation.
- Evaluated model performance using accuracy, precision, recall, F1-score, ROC-AUC curve, and confusion matrix.
- Developed an interactive Streamlit dashboard allowing HR teams to input employee data and receive real-time attrition risk predictions.
- Identified top attrition drivers using feature importance analysis, providing actionable business insights.

AI Data Analyst Chatbot

Technologies: Python, Streamlit, Groq API, Pandas, NumPy, Dotenv

- Developed an AI-powered data analyst chatbot that converts natural language queries into executable Python (Pandas) code for data analysis.
- Loaded and processed datasets using Pandas and NumPy, enabling efficient data manipulation and transformation.
- Utilized Groq LLM to interpret user queries and generate dynamic Python code for filtering, aggregation, and statistical analysis.
- Executed generated code safely and displayed results through an interactive Streamlit interface.
- Enabled users to perform data analysis, insights generation, and exploratory analysis without writing code manually.
- Implemented code validation, sandbox execution, and error handling to ensure secure and reliable outputs.
- Managed API keys securely using environment variables (Dotenv).

Bioactivity Prediction of Chemical Compounds

Technologies: Python, Pandas, NumPy, Scikit-learn

- Built a machine learning model to predict bioactivity of chemical compounds using features from the ChEMBL dataset.
- Performed data preprocessing, feature extraction using molecular descriptors, and train-test splitting.
- Trained a Random Forest model and evaluated performance using accuracy and confusion matrix.
- Gained experience in data analysis and model building with Python libraries such as Pandas, Scikit-learn, and NumPy.

House Price Prediction

Technologies: Python, Pandas, NumPy, Scikit-learn, Streamlit

- Developed a machine learning-based web application to predict house prices based on features like location, area, number of rooms, and amenities.
- Performed data preprocessing and cleaning using Pandas and NumPy, including handling missing values and feature scaling.
- Applied feature engineering techniques to improve model performance.
- Trained regression models such as Linear Regression and Random Forest to predict housing prices.
- Evaluated model performance using metrics like R2 score and Mean Squared Error (MSE).
- Built an interactive Streamlit interface for user input and real-time predictions.

AI Blog Generator

Technologies: n8n, Groq API, HTTP Request, Gmail API

- Built an automated blog generation system using n8n workflows to create content from real-time data sources.
- Integrated SerpAPI/News APIs to fetch latest trending topics and AI-related news.
- Used LLM APIs (Groq/OpenAI) to generate structured blog articles from raw data.
- Designed prompts to produce SEO-friendly and readable blog content.
- Automated content formatting and email delivery using Gmail integration.
- Reduced manual effort by enabling fully automated daily blog creation and distribution.
